

# FOCUS TRIAL REPORT: Seed Treatment

SUBMITTED BY: Tanner Saltsgaver • Illini FS

Yield Map

As-Applied Map

Due to their convenience and effectiveness, seed treatments continue to grow in popularity. They are commonly used to apply small amounts of a product directly to the seed. This is done in hopes of disinfecting the seed and protecting it from seed or soil borne pathogens.

Seed treatments provide early season disease and insect protection and enhance root growth. This trial took place in DeWitt County to test the effect and profitability of seed treatments on soybeans.

TREATMENT	YIELD (Bu/Acre)	MOISTURE (%)	NET \$/Acre
Heads Up	61.1	11.9	\$18.93
Standard	58.6	11.9	

*2019 Cost Average Inputs (Heads Up \$3.75/Bu)  
Soybean Sale Price \$9.07/Bu*
