## Trial comments

'Dry Bean variety Great Northern was planted in 30-inch rows, 4 rows per plot on 13-Jun-2022. The trial site was planted with a Winterstieger 4 row vacuum planter equipped with GPS, hydraulic down force, and clean sweeps. Alley distance between replications was 3 ft as established by the planter. Entire trial site was surrounded by at least an 8 row soybean buffer which was planted on 13-Jun-2022 to AG 27XF1 seed.

Planted trial in low area of field which typically has white mold infection in soybeans. We did not see as much white mold in 2022 as we normally see. This is likely due to dry conditions this season. While we did irrigate the trial site, overall conditions were drier than normal.
